Profile

I am a master's student in Business Analytics at the Norwegian School of Economics (NHH) with a strong interest in data, digital solutions, and cross-disciplinary problem-solving. Over the past few years, I have worked on several practical projects involving data analysis, automation, and model development. I enjoy learning quickly, working in diverse teams, and solving real challenges with simple, structured approaches.

Education

Master's in Business Analytics

Norwegian School of Economics (NHH), Bergen

Graduated 2025

Relevant coursework: Predictive Analytics, Big Data, Application Development in Python.

M.Sc. in Marketing

Umeå School of Business & Economics, Sweden

Graduated 2012

Certifications

- Microsoft Certified: Azure Data Fundamentals (2024)
- Microsoft Certified: Azure Data Scientist Associate (2024–2025)
- PCED™ – Certified Entry-Level Data Analyst with Python (2024)
- PCEP™ – Certified Entry-Level Python Programmer (2024)

Selected Projects

KanGO Data Intelligence Platform (2025–present)

A national data platform for mapping and verifying tourism information in Bangladesh.

- Built automated scripts for collecting and cleaning district-level data.

- Developed backend logic using Python, Node.js, and Firebase.
- Designed workflows for data transparency and API access.
- Gained experience with cloud hosting, teamwork, and practical data challenges.

ESG Analytics with Neural Architecture Search

- Prepared ESG datasets and built deep learning models to improve classification performance.
- Worked with PyTorch to test different architectures and evaluate results.
- Learned how to structure experiments and communicate findings clearly.

Insurance Renewal Pattern Study

- Explored customer renewal trends using Python.
- Identified key variables influencing retention and created simple predictive models.
- Focused on practical interpretation and business relevance.

Tech Firm Performance Modelling (R)

- Applied XGBoost and statistical models to study technology companies' performance metrics.
- Practiced data cleaning, model tuning, and visual communication.

Diplomatic Cable Text Analysis (R)

- Collected public text data from web sources.
- Conducted content analysis to identify themes and patterns using text-processing techniques.

Languages

- English – Fluent
